

- Reduced stormwater runoff as permeable treewell allows rainwater to percolate through to the tree roots
- Supports healthy urban tree growth
- Seamless surfacing reduces consequential trip hazards

Installation process: Crumb rubber granules made from recycled tires are mixed with a bonding agent for the base layer. The mixture is poured over a prepared sub-base and troweled evenly into place. After curing, this base layer is topped with a wear layer of bonded virgin colored rubber; troweled to the level of the surrounding sidewalk and curbs, and cured again over a 24-hour period.

*A wide variety of high-quality, proven products are made from California's recycled tires.
